## Dry Eye Curly Coat Syndrome

Congenital Keratoconjunctivitis Sicca  
and Ichthyosiform Dermatitis, Dry Eye  
Curly Coat Syndrome, CKCSID

Teddy does not have the variant we  
tested

## What is CKCSICD ?

A developmental disease of the eyes, skin, hair, and nails, dogs affected with this condition are prone to corneal ulcers, itchy skin, and thick, cracked paw pads.

## Episodic Falling Syndrome

Teddy does not have the variant we  
tested

## What is Episodic Falling Syndrome ?

This disease causes episodes of spastic muscle contraction in response to stress, excitement, or exercise. EFS is caused by deficiency of a protein called brevicin, which has a role in controlling the speed and rate at which specific neurons in the brain and spinal cord fire. Loss of brevicin leads to abnormal bursts of neuronal activity, leading to the downstream effect of spastic muscle contraction.

## Muscular Dystrophy

The results of this test are provisional.

[LEARN MORE](#)

Teddy does not have the variant we  
tested

## What is Muscular Dystrophy ?

The DMD gene produces the protein dystrophin. Dogs affected with MD have abnormally low levels of functional dystrophin, leading to muscle fiber damage, progressive muscle wasting, and weakness.
